GUIDE BARS

HYDRAULIC GUIDE BARS

MAXCUT offers a superior hydraulic guide bar for use in the toughest application for cutting concrete, brick, decorative stone, or utility pipe. We offer guide bars in 10", 15", 20", and 25" sizes to match the needs of your job.

Our guide bars were Engineered for maximum chain adjustment offering the most in the industry

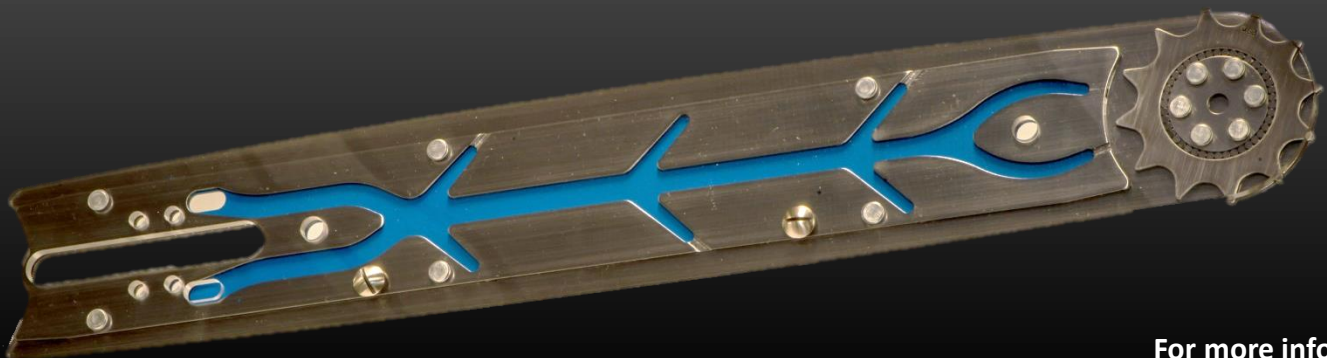

We designed the center of the bar to be slightly wider than the ends to conform to the natural slack in the chain.

Precision machined ports on alternating sides of the bar ensure even distribution of water across the entire chain, not just one side. The separated bar shows the details of the guide bar manifold for water distribution.

At MAXCUT we understand that details matter. We do not hide our guide bars under a coat of paint. We are proud to leave it uncovered to allow you to see the workmanship that goes into these tools.
